

Before you apply a screen protector, wash your hands well. Clean the area around your workspace to keep the area as dust free as possible. Use the included White Dust-absorber to remove any dust from the screen and surrounding area, then use the micro fiber cloth to clean the screen until you can't see any fingerprints.

- a) Attach included Guide Stickers to the front of the screen protector to use as tabs as holding points so you don't have to touch the protector.
- b) Peel back one corner of the backing Layer using the Number 1 Tab.

- c) Hold one corner of the screen protector by the Guide Sticker and slightly peel back the backing.

- d) Align with corner of screen and lay the protector film onto the screen.
- e) Smooth the protector film onto the screen and peel away the backing as you go.

Squeegee Card Tip: Use the squeegee card or credit card to smooth the protector on the screen.

If you notice any bubbles, use the squeegee card or credit card to push it out to the nearest edge, You can also use your fingertips as well.

If you find the bubbles are hard to remove it is probably because there is a piece of dust, under the protector. To remove the dust use the guide sticker to gently lift off and roll back the corner of the protector nearest the dust and use the included smaller blue colored Dust absorber to gently lift off any dust on the back of the protector.

Once you are satisfied with the installation remove the top layer using the number 2 tab to gently lift off the top protective layer.
